

CLEANING INFORMATION

ONLY CLEAN WITH WARM SOAPY WATER

The chrome, brushed chrome and brushed stainless steel coating we use on our taps is very durable. However, extra care should be taken when cleaning by only using warm soapy water, followed by rinsing with clean water and drying with a soft cloth.

All finishes are vulnerable to acid attack and some strong substances such as household cleaners, disinfectants, bleach, essential oils, denture cleaners, hair dyes, wine making elements and photographic chemicals can cause the surface to go black or peel.

Limescale can be removed with a good quality limescale remover such as Viakal P&G.
