

EVENT SV1406

Method For Adjusting the Mixed Water Temperature

1. Unscrew the chrome cover

2. Remove the brass handle stop via the securing screw

3. Rotate the temperature cartridge spindle until a desired maximum temperature is reached. When looking at the front of the valve move anti clockwise for hot.

4. Replace the brass handle stop with the left side of the stop touching the cartridge stop as shown below. This will prevent the handle from being rotated to a higher temperature.

5. Replace chrome cover and temperature control handle via grub screw to side of handle.
