

Open rim, innovative and effective water flow

With its ingenious, innovative toilet technology, Duravit offers everything that today's consumers want from a toilet: easy to clean, hygienic and fitted with a shower function for the utmost comfort.

Small flushing volume, easy to keep clean

Hygienic flushing results are achieved even with small water volumes of just 4.5 liters. Thanks to the open, easily accessible rim area, the bowl is also particularly easy to keep clean, and this reduces cleaning times considerably. The tried-and-tested WonderGliss coating makes the toilet even easier to keep clean. The optional coating that is baked into the ceramics, doesn't give dirt and limescale a chance: deposits cannot adhere and are therefore flushed away more easily with the water.

With its Rimless® technology, thanks to the successful interaction of geometry, optimized flow and design, Duravit has created an example of pure efficiency. The open design of the toilet rim enables an innovative and efficient flush. A dynamic and powerful flow of water describes a horizontal arc, before the water runs down, flushing the entire inner surface of the bowl. Of course, the applicable standards with regard to possible splashing are also observed and, in part, even exceeded.

The advantages

- + Optimized design of flushing rim and geometry of the bowl geometry for dynamic water flow and optimum surface flushing
- + Fully-glazed, extremely smooth ceramics prevent the formation of germs and the build-up of residue
- + Quick and easy to clean, lower cleaning times, less cleaning material
- + Intelligent geometry enables a water level of 16 mm above the specially shaped inner contour
- + Less soiling due to a large water surface
- + Innovative water flow even with a rectangular external shape, resulting in perfect flushing of the inside surface, excellent flushing results even with small water volumes
