

Step1:
Determine the fixing position for the faucet body. Make a groove in the wall according to the faucet body. The dimension of the groove should be 200mm x55mm.

Step 2:
Drill the holes on the wall and connect the cold water inlet and hot water inlet to proper positions.

Step3:
Install the tap body to the right position and make sure Hot&Cold water inlets correct

Step 4:
Secure the cover plate onto the faucet body with sealant.

Step 5:
Remove the indice from the handle, and assemble the handle and spout using the Allen key, then fix the indice to the handle.

Step 6:
Installation completed.
