

Step1:
Determine the fixing position for the faucet body. Make a groove in the wall according to the faucet body. The dimension of the groove should be 200mm x55mm.

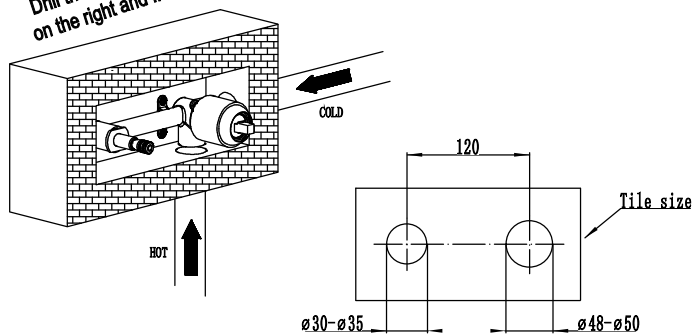

Step 2:
Drill the holes on the wall and connect the cold water inlet and hot water inlet to proper positions.

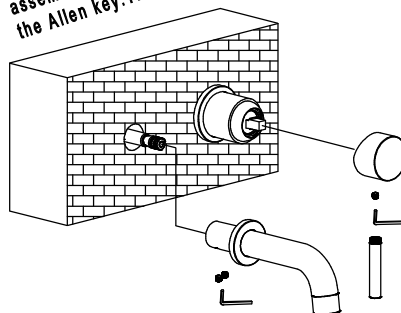

Step3:
Install the tap body to the right position and make sure Hot&Cold water inlets correct

Step 4:
Mount the mixer body. Drill the tile as per the dimension on the right and fit it on the wall.

Step 5:
Screw off the handle lever, and assemble the handle and spout using the Allen key. Then fix the handle lever.

Step 5:
Installation completed.
