

Anti-splash cleaning

On a regular basis the outlet should be inspected & cleaned. Unscrew and remove the outlet.

In areas where lime scale build-up is prevalent this should be avoided by regular cleaning. If it should build up, it will have to be removed. An inhibited proprietary scale solvent can be used such as a kettle de-scaling solvent but it is important to follow the manufacturer's guidelines. After de-scaling it is important to rinse the parts thoroughly in clean water.

Clean carefully and do not use abrasive materials or scrapers.

Cleaning chrome surfaces

When cleaning chromed products use only a mild detergent, rinse & wipe dry with a soft cloth. Ideally clean after each use to maintain appearance.

Never use abrasive, scouring powders or scrapers. Never use cleaning agents containing ammonia, hydrochloric acid, sulphuric acid, nitric acid, phosphoric acid or organic solvents.

Use of incorrect cleaning products / methods may result in chrome damage which is not covered by the manufacturer's guarantee.
